

Janidu Kasuntha

AI & Software Engineering intern

phone: 0704949031 | email: janidukasuntha123@gmail.com | address: Kiribathgoda, Makola

GitHub: github.com/JaniduKasuntha | LinkedIn: linkedin.com/in/janidu-kasuntha

SUMMARY

Motivated undergraduate student, currently studying for a BSc (Honors) in Information Technology with a specialization in Artificial Intelligence. Highly interested in the field of AI, software development, and data analysis. Proficient in Python, SQL, React Native, and other web technologies. By hand practical experience gained through academic and personal projects, seeking an internship opportunity in AI and software development.

EDUCATION

2024 - Present	Computing Sri Lanka Institute of Information Technology (SLIIT) Malabe BSc (Hons) in Information Technology Specializing in Artificial Intelligence GPA: 3.5 Expected Graduation: 2028
2019	English British Council Kollupitiya Professional Reading and writing English Course
2010 - 2023	Nalanda College Colombo GCE Ordinary Level GCE Advance Level (Commerce) O/L: A-4, B-3, C-2 & A/L: B-3

SKILLS

Programming Languages: Python, Java, JavaScript, C, R
Frontend Development: React, React Native, HTML5, CSS3
Backend Development: Node.js, Express.js, Spring Boot, Apache Tomcat, REST APIs
Databases: MySQL, MongoDB
AI & Machine Learning: Feature Engineering, Data Preprocessing, Model Training & Evaluation, Predictive Modelling
Tools & Platforms: Git, GitHub, Postman, Expo, VS Code, Vercel, Railway, Netlify
Soft Skills: Problem-Solving, Teamwork, Communication

PROJECTS

Campus Bites — Mobile Food Ordering Application

2026 | Full-Stack Mobile Development | GitHub - <https://github.com/JaniduKasuntha/CampusBites-Mobile-App.git>

Deployed Link - campus-bites-mobile-app.vercel.app

MongoDB · Express.js · React Native · Node.js · Expo · REST API

- Engineered a full-stack mobile application using the MERN stack (MongoDB, Express.js, React Native, Node.js) with RESTful API architecture, serving campus students and canteen staff.
- Implemented user authentication, real-time order processing, meal management, and a rating system, delivering an end-to-end food ordering workflow.
- Optimized backend API performance to handle 200+ daily transactions with a 98% success rate, improving system reliability under concurrent load.
- Designed RESTful endpoints with Express.js and MongoDB for scalable, schema-flexible data persistence.

Disease Prediction System — Machine Learning Model

2026 | Artificial Intelligence · Data Science

Python · Scikit-learn · Pandas · NumPy · Machine Learning · Classification

- Developed a supervised machine learning disease prediction system in Python using Scikit-learn, trained on a dataset of 400,000+ medical records.
- Performed data preprocessing, feature engineering, and class imbalance handling using Pandas and NumPy to prepare high-quality training data.
- Model is optimizing for F1 score and recall minimizing false negatives in disease detection.
- Applied model evaluation techniques including cross-validation and confusion matrix analysis to validate model generalizability.

Heart Disease Risk Prediction — Predictive ML Model

2025 | Artificial Intelligence · Healthcare Analytics

Python · Scikit-learn · Pandas · NumPy · Predictive Modelling · Feature Engineering

- Built a binary classification predictive model to assess heart disease risk using Python and Scikit-learn, trained on 75,000+ patient records.
- Executed end-to-end ML pipeline: data cleaning, feature selection, model training, hyperparameter tuning, and performance evaluation.
- Applied feature engineering techniques with Pandas and NumPy to extract clinically relevant predictors, improving model precision.
- Evaluated model performance using classification metrics to ensure reliable risk assessment outputs (accuracy 98%).

Medical Centre Booking System — Web Application

2026 | Full-Stack Web Development | GitHub - <https://github.com/JaniduKasuntha/NCC-eCare-Platform.git>

Deployed Link - <https://nccecare.vercel.app>

React · Node.js · Express.js · MySQL · JavaScript · REST API · CSS

- Launched a full-stack web application for appointment booking and management using React, Node.js, Express.js, and MySQL.
- Architected role-based access control with separate modules for patients, doctors, admins, and employees, managing appointments and medical records.
- Built RESTful backend APIs with Express.js, connected to a relational MySQL database for structured data management and added PAYHERE for payments.
- Incorporated AI-assisted management features of Disease Prediction & Doctor suggestion and AI Medical Report Explainer

Gini Bot— Chatbot

2026 | API Chat-Bot | GitHub - https://github.com/JaniduKasuntha/Groq_Nix_ChatBot.git

Deployed Link - <https://groq-gini-chat-bot.vercel.app>

React · Node.js · Vercel · Groq Cloud SDK · Express.js

- Engineered a prototype real-time streaming chatbot for simple tasks with short answers.
- Serverless Deployments: deployed the application to Vercel as a hybrid serverless deployment.
- Use Groq SDK (For API's) to streaming configurations, response payload sanitization, and abort controllers.
- Build to use less tokens for Api calls on input and output for longer usage.
- Successfully integrated a Mobile App for the Chat bot
